DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-15, are drawn to a composition comprising a compound selected from the group consisting of reduced isoalpha acids, tetra-hydroisoalpha acids, and hexahydroisoalpha acids, and a methylxanthine classified in
 - class 424, subclass 400-502 and class 546, subclass 272.7 for example.
- II. Claims 16-31, are drawn to a composition comprising a compound
 - selected from the group consisting of reduced isoalpha acids, tetra-
 - hydroisoalpha acids, and hexahydroisoalpha acids, and a curcuminoid
 - classified in class 424, subclass 400-502 for example.
- III. Claim 32, is drawn to a method of reducing inflammation comprising
 - administering a composition of any of claims 1-31, classified in class 514,
 - subclass 300, 385, 675, and 886 for example.

The inventions are distinct, each from the other because of the following reasons:.

Inventions of Group I and II are directed to unrelated products. The related inventions are distinct if the (1) the inventions as claimed are either not capable of use

Art Unit: 1617

together or can have a materially different design, mode of operation, function, or effect: (2) the inventions do not overlap in scope, i.e., are mutually exclusive; and (3) the inventions as claimed are not obvious variants. See MPEP § 806.05(j). In the instant case, the invention of Group I does not comprise curcuminoid and the invention of Group II dos not comprise methylxanthine.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper. It is noted that while the searches of Group I and II may be overlapping, there is no reason to believe that the searches would be coextensive. In searching Group I, Examiner will be focusing on the patentability of the of the composition comprising methylxanthine, and not comprising of curcuminoid Group II.

Inventions of Group I and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h). In the instant case the composition of Group I can be used as a mild stimulant.

Art Unit: 1617

Because these inventions are independent or distinct for the reasons given

above and there would be a serious burden on the examiner if restriction is not required

because the inventions have acquired a separate status in the art in view of their

different classification, restriction for examination purposes as indicated is proper.

Inventions of Group II and III are related as product and process of use. The

inventions can be shown to be distinct if either or both of the following can be shown: (1)

the process for using the product as claimed can be practiced with another materially

different product or (2) the product as claimed can be used in a materially different

process of using that product. See MPEP § 806.05(h). In the instant case the

composition of Group II can be used to treat cancer.

Because these inventions are independent or distinct for the reasons given

above and there would be a serious burden on the examiner if restriction is not required

because the inventions have acquired a separate status in the art in view of their

different classification, restriction for examination purposes as indicated is proper.

Claims 1-32 are generic to the following disclosed patentably distinct species:

1) reduced isoalpha acid;

2) reduced tetra-hydroisoalpha acids:

3) reduced hexahydroisoalpha acids;

4) methylxanthine; and

5) curcuminoid.

If the applicant elects group I, a species is required of a reduced isoalpha acid, or

a reduced tetra-hydroisoalpha acid, or a reduced hexahydroisoalph acid, and a

methylxanthine. Whereas, if the applicant elects group II, a species is required of a

reduced isoalpha acid, or a reduced tetra-hydroisoalpha acid, or a reduced

hexahydroisoalph acid, and a curcuminoid.

The species are independent or distinct because they read on several structures

that are classified in various classes and/or subclasses. Applicant is required under 35

U.S.C. 121 to elect a single disclosed species, even though this requirement is

traversed. Applicant is advised that a reply to this requirement must include an

identification of the species that is elected consonant with this requirement, and a listing

of all claims readable thereon, including any claims subsequently added. An argument

that a claim is allowable or that all claims are generic is considered nonresponsive

unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration

of claims to additional species which depend from or otherwise require all the limitations

of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after

the election, applicant must indicate which are readable upon the elected species.

MPEP § 809.02(a).

Application/Control Number: 10/789,817

Art Unit: 1617

Applicant is advised that the reply to this requirement to be complete must

Page 6

include (i) an election of a species or invention to be examined even though the

requirement be traversed (37 CFR 1.143) and (ii) identification of the claims

encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To

reserve a right to petition, the election must be made with traverse. If the reply does not

distinctly and specifically point out supposed errors in the restriction requirement, the

election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not

patentably distinct, applicant should submit evidence or identify such evidence now of

record showing the inventions or species to be obvious variants or clearly admit on the

record that this is the case. In either instance, if the examiner finds one of the inventions

unpatentable over the prior art, the evidence or admission may be used in a rejection

under 35 U.S.C.103(a) of the other invention.

No phone call was made due to the complexity of the restriction requirement.

Conclusion

Application/Control Number: 10/789,817 Page 7

Art Unit: 1617

273-8300.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kendra D. Carter whose telephone number is (571) 272-

9034. The examiner can normally be reached on 8:30 am - 5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Sreeni Padmanabhan can be reached on (571) 272-0629. The fax phone number for the organization where this application or proceeding is assigned is 571-

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
